This was the reply from our tree surgeon regarding the size of the tree and the work to be carried out.

[REDACTED]

This was the added information you need for the council

Whole crown is 24 meters approximately, it's heavier on the south side by approximately 14 mtres to 10 meters, due to being worked on before, this will be cut back to suitable growth points leaving a more balanced tree,

The tree also has substantial amounts of large deadwood that could benefit from taking out due to it being over the footpath and the road south side will be reduced back by 3 meters approximately and then tapering back into the crown
