

Sam

The access works are within the highway boundary. Ive filled in the non highway boundary slither of land between the PROW show in blue attached to make it a bit more obvious.

With regard to the field access, (im assuming this is at the point that the PROW enters the field best shown here <https://maps.app.goo.gl/L3kzxYbTs7cvy3oH6>) given it would be used irregularly and there would be no/very limited movements between the minor arms then no concerns are raised on its proximity/interaction with the site access.

Regards

Stephen
