

Objection to DC/26/0972 and DISC/26/0255

Objection from [REDACTED] 10 Melton Drive Storrington RH20 4LU

I believe that a Barbastelle bat mitigation package is required 'as a condition of any consent' and as this does not feature in the design DC/26/0972 or on the Biodiversity Enhancement Strategy I am presuming, therefore, that ***this application does not comply with the Conservation of Habitats and Species Regulations 2017.***

With regard to the conservation of habitats and species I feel compelled to add that any development on the land North of Melton Drive will have a colossal impact on wildlife, Including: Roe deer, foxes, rabbits, shrews, [REDACTED], Tawny owls, Jays, Green woodpeckers, Greater spotted Buzzards, Red Kites and a huge variety of other smaller garden birds, (and many other much smaller species) many of which will be completely driven out by any new housing developments. With regard to the Barbastelle bats - which are very rare, they will be particularly sensitive to any changes in their environment particularly to sound and movement and any physical changes to the environment they live and hunt in.

This application is contrary to so many environmental concerns that it should be refused
