REVISED REPORT ON A PHASE 1 DESK STUDY AND RISK ASSESSMENT FOR A PROPOSED CARE HOME DEVELOPMENT, OLD HORSHAM FIRE STATION, HURST ROAD, HORSHAM, RH12 2DN

1. INTRODUCTION AND OBJECTIVES

- 1.1 This report has been prepared on instructions given by the Client EQ Care Horsham Limited (46 Curzon Street, London, W1J 7UH). A Phase 1 Desk Study report for the site was originally issued in December 2024, further to comments from the Local Authority and the review of additional information the Phase 1 Desk Study has been revised, updated and re-issued.
- 1.2 The site is located on the south western side of Hurst Road in the centre of Horsham, Surrey as shown on Figure 1, Appendix (i). Horsham lies to the south west of Crawley. As shown on Figure 2, Appendix (i), the site is irregular in shape and comprises the premises of a former fire station. The site is at and around National Grid Reference 517600 131300 and covers an area of around 0.43ha (Reference 1).
- 1.3 The aims of the Phase 1 desk study and risk assessment were to:
- Undertake research into the site history, geology and surrounding environs.
 - Review proposals and plans for the proposed works.
 - Assess the nature and location of possible sources of contamination at the site.
 - Construct an initial conceptual site model.
 - Undertake hazard identification and assessment.
 - Assess the need for any investigation of potential contamination including ground gases.
 - Present an interpretive report on the findings with recommendations for any further works.
- 1.4 Proposals are to demolish the existing structures and redevelop the site with a new three storey care home with garden area and associated car parking. The development proposals also include a groundwater abstraction borehole to provide water for the new development. A plan showing the proposed layout is presented as Figure 3, Appendix (i).
- 1.5 The assessment and reporting has been carried out in general accordance with the following:
- BS 10175:2011+A2:2017. Investigation of Potentially Contaminated Sites – Code of Practice.
 - Environment Agency 2010 GPLC3 Reporting Checklists.
 - DEFRA 2012. Environmental Protection Act 1990: Part 2A. Contaminated Land Statutory Guidance. H M Government.

2. SOURCES OF INFORMATION

- 2.1 In the preparation of this report the sources of information detailed in Table 2.1 below have been consulted:

Table 2.1 Sources of Information

Information Type	Source
Envirocheck Report	Landmark Information Services
Geological Maps	British Geological Survey (Reference 2)
On Line Geological Maps	British Geological Survey website
Groundwater Vulnerability	DEFRA
Radon	UK Health Security Agency and Reference 3
GeoIndex Borehole Database	British Geological Survey website
On Line Satellite and Street Level Imagery	Google, Bing websites
On Line Maps	Ordnance Survey and Street Map websites
Local pollution incidents	Environmental Heath Horsham District Council
Hydrogeological Appraisal	H2O Geo
Utilities Survey	Twenty 20 Surveys
UXO Risk Assessment	Landmark Information Services and 6 Alpha

Full details of the sources are given in the references and list of website addresses included in this report.

- 2.2 The environmental and geological information used in this report is drawn from datasets which comprise publicly available data including information from third parties, some of which is under review. Accordingly, Compass Geotechnical Limited does not warrant its accuracy, reliability or completeness.

3. SITE RECONNAISSANCE

- 3.1 A site visit and walkover survey were undertaken on 18th December 2024 and selected photographs of the site are presented in Appendix (iii).
- 3.2 As shown on Figure 2, Appendix (i), the site is irregular in shape and is accessed directly from Hurst Road which forms the north eastern boundary. The existing main 'L-shaped' structure of the fire station is of two storey brick construction and extends along the north eastern and south eastern boundaries. Internal access to the buildings was not available at the time of the walkover survey however, from the property sale particulars provided by the client it is believed that the appliances were housed in the north eastern section of the main building with access directly from Hurst Road via an area of asphalt hard standing. This north eastern section of the main building also

included a garage and workshop with offices, while dormitories, stores, recreation rooms, a boiler room and meeting rooms were housed in the south eastern section. Externally a car port is present in the south of the main building along with a modern above ground internally bunded heating oil tank and a generator. To the west of the main building is a concrete covered yard area with a number of manhole covers and possibly interceptor covers (see Section 3.4). Toward the western corner of the site is a further structure of two storey construction with a five storey tower used for training purposes. This smaller building includes training rooms, stores, a boiler room and a training pipe (confined spaces training).

From the northern corner of the site an asphalt roadway leads south westwards to a car park at the rear of the site. A low brick retaining wall separates the roadway and car park from the lower lying land to the north and an ambulance station to the west. A set of steps leads up from the rear car park into the yard area between the training building and the main building. At the time of the walkover survey vehicle access to the site was prohibited by concrete blocks and other barriers and steel security panels were present over all doors and windows. A further roadway runs along the south eastern site boundary providing access to the rear car park and to the police station and law courts to the south and south east. Small grassed landscaped areas with occasional trees and bushes are present along the north eastern elevation of the main building adjacent to Hurst Road.

- 3.3 Subsequent to the initial walkover survey it is understood that a groundwater abstraction borehole was installed in March 2025 in the northern section of the site (see also Section 6.1).
- 3.4 The utilities survey drawing confirms that there are two storm water interceptors located towards the southern corner of the yard between the buildings. No evidence of any below ground fuel tanks was uncovered during the utilities survey and as discussed in Section 3.2 only an above ground heating oil tank was noted during the walkover survey.
- 3.5 To the south east are law courts whilst to the south and south west are a police station and an ambulance station. Horsham hospital lies immediately to the north west and a college is present to the north east on the opposite side of Hurst Road, whilst houses lie to the east.
- 3.6 No evidence of significant contamination was uncovered during the site walkover and it is thought that the training tower was used for ladder rescue training as no burning or scorching of the bricks was noted.
- 3.7 The topography of the general area slopes down gently to the south and south west.

4. SITE HISTORY

- 4.1 The following table (Table 4.1) on site history is based on maps contained in the Envirocheck Report obtained from the Landmark Information Group. The maps cover the period 1874 to 2024 and comprise County Series and Ordnance Survey Plans. All of the maps are presented in Appendix (ii). It should be noted that some of the editions only cover part of the area under consideration and that the maps presented are normally a composite of a number of plans which may span a period of several years. We would note that the outline of the site marked on the historical sheets within the Envirocheck Report appears to 'shift' on several of the maps due to scaling inaccuracies between maps of differing dates. This is a function of Envirocheck transposition algorithms. It should also be noted that some of the features on the 1:10,560 and 1:10,000 scale maps are not readily discernible.

Table 4.1 Site History

Map Edition (scale)	On Site History	Off Site History
1875 (1:2,500) 1874, 1879 - 1880 (1:10,560)	The site comprises open fields with tree lined field boundaries. A small structure is present along the south western boundary associated with a house immediately off site to the south west.	Hurst Road forms the north eastern boundary immediately beyond which is Lambsbottom Brickworks with associated clay pits, clay mills and a brick kiln. A bowling green and associated buildings lie a short distance to the south of the site associated with a park to the south west and west. A railway line and Horsham Station lie around 400m to the east and south east. Around the site are open fields and isolated farms with the town of Horsham to the south. A stream flows to the south west around 250m to the north of the site.
1897 (1:2500) 1898 - 1899 (1:10,560)	The small structure has been removed from the south western boundary.	The excavations associated with the brickworks have been extended further to the north and in the area adjacent to Hurst Road. A grammar school and cottage hospital are present to the north and houses have been built to the south east on the opposite side of Hurst Road.
1911 (1:2,500) 1912 - 1913 (1:10,560)	The site remains unchanged from the earlier map editions.	The brickworks to the north east is no longer in use but some of the buildings and excavation faces adjacent to Hurst Road are still in evidence. The town of Horsham has expanded with construction of houses and industrial uses along the railway line to the east and south east.
1932 (1:2,500)	No significant changes are noted at the site	The house immediately off site to the south west is no longer marked. The hospital and grammar school to the north

Map Edition (scale)	On Site History	Off Site History
1932 – 1933, 1938 (1:10,560)		and north east have increased in size. Houses have been built on the opposite side of Hurst Road to the north east in the area of the former brick works along with a market and allotment gardens. By 1938 the town of Horsham has increased significantly in size.
1963 (1:1,250) 1964 (1:2,500) 1961, 1966 - 1967 (1:10,000)	No significant changes are noted at the site. A small pond just impinges on the south western boundary.	The school and hospital to the north and north east have increased in size and offices are shown to the south east of the site. Some of the fields to the north east are now marked as playing fields associated with the school. The allotment gardens are no longer marked and the stream to the north may have been culverted. The market to the east has expanded and further houses are shown in the area.
1969 – 1980, 1974, 1975, 1977 - 1985 (1:1,250) 1970 (1:2,500) 1982 - 1983 (1:10,000)	The site has been developed with construction of the fire station consistent with the current layout.	The area around the site has continued to be developed with construction of the ambulance and police stations and magistrates court to the south and south west. Expansion of the hospital to the north west is noted.
1988 – 1991, 1991, 1993, 1996 (1:1,250) 1993 (1:10,000)	No significant changes are noted at the site.	Some infill housing development has taken place in the surrounding area including to the south east in the area of the former brickworks.
1999 (Historical Aerial Photograph)	The aerial photograph confirms the site as a fire station with two main structures with a yard and car parking areas.	The surrounding area is a mix of commercial and residential with a park to the west and south west.
2000 (1:10,000)	10k Raster Mapping – the site remains unchanged.	No significant changes noted.
2006 (1:10,000)	10k Raster Mapping – the site remains unchanged.	No significant changes noted.
2024 (1:10,000)	10k Vector Map local – the site remains unchanged.	The school to the north has been extended.

It is understood that the fire station opened in 1968 and closed in 2023.

- 4.2 As the site is located in south eastern England there is the potential for Unexploded Ordnance (UXO) from WWII. On-line sources of UXO information including the Zeitica UXO Risk Maps suggest relatively low levels of bombing in the area and on line searches suggest around 22 raids in and around Horsham between 1940 and 1944. A preliminary UXO Risk Assessment was commissioned from the Landmark Information Group in partnership with 6 Alpha. The risk assessment concluded that the density of bomb strikes in the Horsham area was very low and no further investigation into UXO is warranted. A full copy of the UXO information is presented in Compass Geotechnical Limited Letter Report 243128L-1 UXO dated 14th April 2025.

5. PUBLISHED GEOLOGY AND RADON

- 5.1 Published geological information (Reference 2) indicates that the site lies in an area where the general downwards strata succession is as detailed in Table 5.1 below:

Table 5.1 Geological Sequence

Lithology	Lithological Description	Age Range
Upper Tunbridge Wells Sand	Mudstone	137.0 – 132.6 Ma
Upper Tunbridge Wells Sand	Sandstone and Mudstone	137.0 – 132.6 Ma

The published geological map (Reference 2) indicates that the site is underlain by solid deposits of the Upper Tunbridge Wells Sand and no superficial deposits are shown in the area.

- 5.2 A search of the British Geological Survey borehole database (GeoIndex) indicates that there are few borehole records in the area of the site. The closest borehole, around 350m to the south east, indicates around 1.8m of made ground overlying clays and shales of the Upper Tunbridge Wells Sand to at least 6m bgl.
- 5.3 Published and on-line resources on the occurrence of radon and the need for protection measures in new dwellings (Reference 3) indicate that radon protection measures are not necessary. The Envirocheck Report, presented in Appendix (ii), confirms that the site is in a lower probability radon area.
- 5.4 The Envirocheck Report and other information indicate that the site is not in an area affected by coal mining.
- 5.5 The Envirocheck Report indicates potential geological ground stability hazards for the site which are summarised in Table 5.2 below.

Table 5.2 Ground Stability Hazard

Potential Geological Ground Stability Hazard	Hazard Potential
Collapsible Ground	Very Low
Compressible Ground	No Hazard
Ground Dissolution	No Hazard
Landslide	Very Low
Running Sand	Very Low/No Hazard
Shrinking or Swelling Clay	Very Low/No Hazard

- 5.6 Information on estimated Soil Chemistry contained in the Envirocheck Report indicates that there are no elevated concentrations of arsenic, cadmium, chromium, lead or nickel in the area of the site.
- 5.7 Details of BGS recorded mineral sites listed in the Envirocheck Report are summarised in Table 5.3 below. There are seven recorded mineral sites within 1km of the site.

Table 5.3 BGS Recorded Mineral Sites

Entry	Distance From The Site			
Recorded Mineral Sites	On Site	0 to 250m	251 to 500m	501 to 1000m
	0	1	1	5
The closest recorded mineral site is for a brick works some 182m to the east which is the Lambsbottom Brick Works shown on the historical maps on the opposite side of Hurst Road.				

The more distant recorded mineral sites are considered unlikely to influence the proposed development. However, the former Lambsbottom Brick Works immediately to the east on the opposite side of Hurst Road could influence the proposed development depending on the nature of any backfill materials although the majority of the former brickworks has been developed for housing and some commercial use.

- 5.8 There are no natural cavities or mining cavities listed within 2km of the site.

6. GROUNDWATER VULNERABILITY, HYDROGEOLOGY AND HYDROLOGY

- 6.1 The DEFRA web site and Envirocheck Report indicate the following in terms of published groundwater vulnerability, a summary is given in Table 6.1 below.

Table 6.1 Groundwater Vulnerability

Groundwater Vulnerability	Designation
Superficial Deposits	None present
Bedrock Deposits	Secondary A Aquifer
Groundwater Vulnerability	High Vulnerability Secondary Aquifer
Groundwater Source Protection Zone (GSPZ)	None
Soluble Rock Risk	None

The latest Environment Agency groundwater vulnerability maps class the site as a High Vulnerability Secondary Aquifer but the site does not lie in a Groundwater Source Protection Zone (References 8 and 9).

Although the published information does not indicate the presence of a groundwater source protection zone, the hydrogeological report by H2O Geo assumes a 50m protection zone around the new abstraction point. It is understood that the new abstraction point is around 48m deep with 19.5m of plain casing in the top section and 28m of slotted casing with a pea gravel surround in the lower section. A bentonite cement seal was installed in the upper 10m and on completion a resting groundwater level of around 7.96m bgl was recorded. The plain casing and bentonite seal would prevent any contaminants in the near surface soils entering the borehole and migrating into the groundwater. Preliminary testing of the groundwater has not indicated the presence of contamination including PAHs, VOCs and BTEX (see also Section 6.4).

- 6.2 There are ten discharge consents recorded in the Envirocheck Report in the area around the site as summarised in Table 6.2 below.

Table 6.2 Discharge Consents

Entry	Distance From The Site			
Discharge Consents	On Site	0 to 250m	251 to 500m	501 to 1000m
	0	0	3	7
The closest discharge consent is for discharge of other matter – surface water some 359m to the east of the site.				

The discharges identified in Table 6.2 are unlikely to influence the proposed development.

- 6.3 There are thirteen Integrated and Local Authority Pollution Prevention and Controls (LAPPCs) in the area around the site as detailed in Table 6.3 below.

Table 6.3 Integrated and Local Authority Pollution Prevention and Controls (LAPPCs)

Entry	Distance From The Site			
Integrated and LAPPCs	On Site	0 to 250m	251 to 500m	501 to 1000m
	0	0	4	9
The closest LAPPC relates to waste oil burners some 282m to the south east of the site.				

The LAPPCs are sufficiently distant not to influence the proposed development.

- 6.4 There are thirty seven pollution incidents to controlled waters are listed in the Envirocheck Report as detailed in Table 6.4 below.

Table 6.4 Pollution Incidents to Controlled Waters

Entry	Distance From The Site			
Pollution Incidents to Controlled Waters	On Site	0 to 250m	251 to 500m	501 to 1000m
	0	4	12	21
The closest incidents were around 65m to the west and relate to minor oil contamination in the 1990s.				

The listed incidents are not considered likely to influence the proposed development.

Information from the Environmental Health department of Horsham District Council indicates that there was a significant oil leak at the community hospital around 9 years ago and that contamination of the underlying aquifer with hydrocarbons is suspected despite the effects of natural attenuation. Information available on line also confirms hydrocarbon pollution of a stream to the south of the hospital in 2019 associated with a spillage of diesel on the hospital grounds and from the available information it is believed that the hydrocarbons migrated via the surface water drains to impact a nearby stream to the south west. Recent testing of the quality of the groundwater below the site presented in the H2O report does not suggest the presence of hydrocarbons such as PAHs and BTEX which may indicate that the groundwater below the site has not been impacted by the nearby oil spill.

- 6.5 The Envirocheck Report provides the following information on water abstraction in the area of the site as summarised in Table 6.5 below.

Table 6.5 Water Abstractions

Entry	Distance From The Site			
Water Abstractions	On Site	0 to 250m	251 to 500m	501 to 2000m
	0	0	2	3
The closest water abstraction is for general use (chemicals) some 413m to the north east. The remaining abstractions are generally for process water and spray irrigation. There are no recorded public water supply boreholes within 2km of the site.				

The proposed development is unlikely to influence the water abstractions listed above. The newly installed groundwater abstraction point at the site is also unlikely to be influenced by the proposed development.

- 6.6 The closest surface feature is a small pond within the hospital grounds some 128m to the north west. An inland river is present around 670m to the south east which is within the catchment of the Rivers Rother and Arun (Water Framework Directive). It is believed that the stream 250m to the north of the site shown on the historical maps has been culverted and is no longer present at surface. There is no information on the quality of surface water within the area around the site.
- 6.7 Table 6.6 below summarises the risk of flooding at the site and is based on information contained in the Envirocheck Report and from long term flood risk information the UK government. Flooding from surface water is difficult to predict as rainfall location and volume are difficult to forecast. In addition, local features can greatly affect the chance and severity of flooding.

In the case of flooding from rivers and sea this takes into account the effect of any flood defences in the area. These defences reduce but do not completely stop the chance of flooding as they can be overtopped, or fail.

Table 6.6 Flood Risk Summary

Flood Type	Flood Risk	
	On Site	Off Site
Extreme Flooding from Rivers or Sea without Defences (Zone 2)	None	None
Flooding from Rivers or Sea without Defences (Zone 3)	None	None
Potential for Flooding from Surface Water	Low along S boundary	Low and medium adjacent to NW and SE boundaries
Potential for Groundwater Flooding to Occur	Limited	Limited
Potential for Groundwater Flooding of Property Situated below Ground Level	None	None

- 6.8 There are no entries on the Contaminated Land Register within 2km of the site.
- 6.9 Given the topography of the site, groundwater and surface water flow directions are not readily discernible but are likely to be in a general southerly direction.
- 6.10 Based on the foregoing information, a site sensitivity assessment for the water environment has been undertaken in accordance with the recommendations of Reference 5 and is presented in Table 6.7 below. The DEFRA website indicates that the site is classified as a Secondary Aquifer of high vulnerability in terms of groundwater vulnerability. The published information suggests there is little sensitive water use in the immediate area and the site is not within a current Groundwater Source Protection Zone. However, the newly installed groundwater abstraction point is likely to increase the perceived sensitivity of the groundwater below the site.

Table 6.7 Water Environment Sensitivity Assessment

Water Environment	Sensitivity Assessment
Groundwater	H1 Very High
Surface Water	M1 to H2 Moderately High to High

7. INDUSTRIAL LAND USES

- 7.1 As discussed in Section 3, the site lies in a mixed use area with commercial and residential use. The Envirocheck Report lists surrounding land uses based on contemporary trade directory entries, which may highlight potentially contaminative land uses. Details of the trade directory entries within are given in Table 7.1 below. It should be noted that not all of the businesses listed are active.

Table 7.1 Trade Directory Entries

Entry	Distance From The Site			
	On Site	0 to 250m	251 to 500m	501 to 1000m
Contemporary Trade Directory Entries	0	16	30	275
The closest directory entry relates to the hospital around 60m to the north west.				
Fuel Station Entries	0	0	0	3
The closest fuel station is listed as Rushame Road Service Station some 547m to the west. None of the fuel stations listed are active.				

The trade directory entries confirm there is some commercial use in the area. However, it is known that the site itself was used as a fire station (1968 – 2023) but this land use along with the associated ambulance and police station are not listed in the trade directories.

8. LANDFILL AND WASTE MANAGEMENT FACILITIES

- 8.1 The Envirocheck Report indicates there are no landfills or waste management facilities within influencing distance (250m) of the site.
- 8.2 The Envirocheck Report also lists areas of potentially infilled ground. Twenty six such features are noted between 14m and 1000m from the site. The more distant features are unlikely to influence the proposed development. However, the former brickworks on the opposite side of Hurst Road is listed as infilled ground and could be a source of ground gases depending on the nature of any backfill. It is noted that the majority of this area has been developed with housing in the past.

9. SENSITIVE LAND USES

- 9.1 The site lies in a Nitrate Vulnerable Zone (NVZ) for surface water.

10. INITIAL CONCEPTUAL SITE MODEL

10.1 Assessing Contamination

The processes for assessing contamination should be based on the protection of human health, building materials and the environment using the SOURCE-PATHWAY-RECEPTOR concept. The sources, pathways and receptors relevant to the site are identified using a conceptual site model as outlined in Guidance for the Safe Development of Housing on Land Affected by Contamination (Reference 5), although it is appreciated that the end use of the site is to be as a care home. Reference is also made to the procedures in the Environment Agency Land Contamination Risk Management (Reference 6), BS 10175:2011+A2:2017 (Reference 4) and the DEFRA Contaminated Land Statutory Guidance (Reference 7). The preliminary conceptual site model presented in the following is based on the findings of the desk top study and thus contains elements of conjecture and hypothesis. Where necessary elements of the conceptual site model may be investigated to obtain actual data on conditions below the site.

In the following sections, the individual components of the identified possible pollutant linkages are assessed.

10.2 Sources of Contamination

The study has found some evidence of potentially contaminative previous and current uses of the site and surrounding land as summarised in Table 10.1 below.

Table 10.1 Potential Sources and Types of Contamination

Potential Sources	Contaminants of Concern
On Site Historical	
Open fields with small pond in south west	No significant sources of contamination identified
Fire Station (since 1970) including possible made ground associated with construction, vehicle storage and maintenance, interceptors and above ground heating oil storage	Heavy metals, PAHs, Hydrocarbons, fuel and oil – point sources only from leaks and spills, potential PFAS, asbestos.
On Site Present Day	
Former Fire Station – not operational since 2023	Heavy metals, PAHs, Hydrocarbons, fuel and oil – point sources only from leaks and spills, potential PFAS, asbestos.
Off Site Historical	
Brickworks and associated excavations 15m to east (pre 1911) – majority built over with houses	Heavy metals, PAHs, hydrocarbons, possible source of ground gases depending on nature of any backfill.

Potential Sources	Contaminants of Concern
Hospital, school, ambulance station, police station, law courts	Heavy metals, PAHs, hydrocarbons – not thought to be significant sources
Pollution incident associated with hospital to north west – not thought to have impacted site	Hydrocarbons (affecting nearby water course and possibly groundwater locally)
Allotment gardens (pre 1960s)	Heavy metals, pesticides and herbicides – not thought to be significant source as >60 years old
Houses with gardens and parkland	Not considered a significant source
Off Site Present Day	
Hospital, school, ambulance station, police station, law courts	Heavy metals, PAHs, hydrocarbons – not thought to be significant sources
Pollution incident associated with hospital to north west	Potential for residual hydrocarbons in groundwater
Houses with gardens and parkland	Not a significant source of contamination

10.3 Receptors at Risk

This assessment identifies potential receptors within the following four categories which may be affected by the presence of contaminants.

- i. end users of the site who may be exposed to sources of contamination on a regular and predictable basis.
- ii. controlled waters i.e. surface water, ground water and perched water.
- iii. building structures, materials and services in the ground
- iv. other targets such as construction workers

Table 10.2 below lists the main sensitive targets within these categories.

Table 10.2 Receptors at Risk

Category	Details of Receptor
End Users	End users of the new care home including residents and staff, visitors (adults and children), and delivery/maintenance personnel (adults). Long term residents and staff are likely to be most sensitive receptors. Off-site end users of surrounding properties.
Controlled Waters	Site underlain by High Vulnerability Secondary Aquifer. Groundwater sensitivity H1 (Very High) – due in part to new groundwater abstraction point on site. Surface Water sensitivity assessed as M1 to H2 (Moderately High to High).
Buildings/services	Buildings and services may be susceptible to contaminants in the ground.
Other targets	Short term exposure of construction workers

10.4 Pathways

Consideration has been given to the potential pathways identified in the CLEA Model as ingestion, inhalation of soil/dust, gasses or vapours, dermal contact and consumption of garden vegetables or fruit by which receptors could be affected by contaminants. Table 10.3 below summarises potentially active pathways given the form of the development for a residential care home with landscaped grounds although a care home is not a standard land use scenario within the CLEA Model.

Table 10.3 Potential Pathways for a Residential Care Home

Category	Details of Pathway
End Users – On Site	Potential identified pathways in gardens and soft landscaping areas and ingress into water supplies (pipes and from abstraction borehole). Possible ingress of ground gases associated with infilled former brickworks to east or any deep made ground.
End Users – Off Site	Migration of contaminants off site.
Controlled Waters	Vertical migration of mobile/leachable contaminants on site to groundwater or migration to surface water. Water environment reasonably sensitive - Groundwater H1, surface water M1 to H2.
Buildings/services	Potential influence on water supply pipes and construction materials.
Other targets	Potentially Active Pathway for dermal contact, inhalation of soil/dust for construction workers in short term.

10.5 Preliminary Conceptual Site Model

Based on the preceding information, a preliminary conceptual site model of pollutant linkages on the site has been developed. The model is presented in Table 10.4 which also includes a qualitative estimation of risk for each active pollution linkage based on consideration of the likelihood of an event (probability) and the severity of the potential consequence. If no pollutant linkage exists then there is no potential risk. Definitions for the severity of the consequences and the probability are given in Appendix (iv). Once the consequence and probability have been classed for a pollutant linkage they can be compared to categorise the risk (Reference 5). Risk categories can range from very low risk to very high risk, which are defined and described in Appendix (iv).

Table 10.4 Preliminary Conceptual Site Model of Pollutant Linkages

Sources Potentially Present	Receptors	Pathways	Qualitative Assessment of Risk
Former fire station, possible made ground associated with construction, vehicle storage and maintenance, interceptors and above ground heating oil storage	End Users – On Site	Contact with soils/dust, inhalation, ingestion	Very low to low risk
	End Users – On Site	Ingress of gas/vapour	Low risk – only if deep made ground is present
	End Users – Off Site	Migration	Very Low risk
	Controlled Waters	Migration	Very low to low risk
	Buildings/Services	Ingress into water supply pipes	Negligible with appropriate selection of water supply pipes.
	Construction Workers	Contact with soils/dust	Negligible with appropriate PPE
Surrounding commercial land use including hospital, school, police station, ambulance station, law courts, possible made ground associated with construction.	End Users – On Site	Contact with soils/dust, inhalation, ingestion	Very low to low risk
	End Users – On Site	Ingress of gas/vapour	Low risk – only if deep made ground
	End Users – Off Site	Migration	Very Low risk
	Controlled Waters	Migration	Very Low to Low risk

Sources Potentially Present	Receptors	Pathways	Qualitative Assessment of Risk
Known pollution incident involving hydrocarbons associated with hospital 60m distant (not thought to have impacted site)	Buildings/Services	Ingress into water supply pipes	Negligible with appropriate selection of water supply pipes.
	Construction Workers	Contact with soils/dust	Negligible with appropriate PPE
Former brickworks 15m to east pre 1911 – majority built over	End users – on site	Ingress of ground gases/vapour into structures	Low to moderate risk depending on nature of any backfill

The conceptual model has identified some potential active pathways at the site along with some potential sources of contamination.

Risks to construction workers may be mitigated by adopting good practices on site. It is recommended that gloves, boots and overalls should be worn to reduce the risks of skin contact and a high standard of hygiene should be maintained on site to reduce risks of hand to mouth transfer.

10.6 Uncertainties

The foregoing assessment represents a reasonably robust and comprehensive assessment of the potential for contamination and possible risks to receptors. However, it is recognised that the information on which the assessments are based is, in places, incomplete. It is known that the site was formerly a fire station but it is not thought that any vehicle fuel was stored at the site in below ground tanks. The extent of any potentially contaminative activities associated with fire training exercises and the use of chemicals such as PFAS is unknown and cannot wholly be discounted, although the presence of hardstanding and the collection of surface water and run off into interceptors is likely to have minimised the likelihood of such substances impacted the soils below the site.

10.7 Discussion and Conclusions

The desk study and walkover survey at the site has identified some potential sources of contamination associated with the former use of the site as a fire station including areas for vehicle storage and maintenance, interceptors and above ground heating oil storage. Although the fire station included training facilities due to the lack of scorching on the tower it is thought that this may only have been used for ladder rescue practice. The possible use of PFAS at the site cannot definitively be ruled out but the presence of continuous hard standing across the site and the surface water interceptors would minimise the likelihood of migration of contaminants into the underlying soils below the site.

Although no evidence was uncovered of significant contamination the change to a more sensitive land use requires that further assessment is carried out to safeguard the health of end users and construction personnel. There are also concerns over the potential for the presence of ground gases either from any deep made ground or migrating from the backfilled former brickworks excavations a short distance to the east.

The following assumes that any asphalt surfacing and associated sub base materials used in the current hard standing areas are removed as part of the site preparatory works unless it can be prove suitable to remain on site. It is also assumed that prior to demolition of the existing buildings that an asbestos survey is undertaken by a suitably experienced contractor to identify any asbestos containing materials and advise on their safe removal and disposal.

Proposed investigations should include boreholes to establish the thickness and extent of any made ground, the nature of the underlying natural soils and the ground gas regime. The exploratory holes should provide information across the proposed housing development and could also be used to provide geotechnical information for construction purposes and to classify materials for disposal off site. If there is evidence of significant contamination, particularly of the groundwater, then further drilling and testing may be required

Laboratory testing should be undertaken for a range of contaminants relevant to the previous and current uses of the site, historical and current use of the surrounding area and observations on site. It is proposed to initially test for the following contaminants, although this may vary depending on the findings on site: Heavy Metals, Speciated Polyaromatic Hydrocarbons, Total Petroleum Hydrocarbons and asbestos. Where groundwater is encountered, samples may be recovered for analysis if deemed necessary.

The findings of the investigation should be presented in an interpretative report which include quantitative and qualitative risk assessments and discussions of possible remedial action if unacceptable levels of contamination are present. The work should be undertaken in accordance with current UK methodologies and recognised standards. Should significant contamination be identified then a further phase of investigation may prove necessary.

In addition, if any unforeseen contamination is encountered during the development works this should be reported immediately so that appropriate action can be taken.

GENERAL NOTES – DESK STUDY

A desk study means that no site visits have been made unless otherwise specified.

The report provides factual data for the site obtained only from the sources described in the text and related to the site on the basis of the location information supplied by the Client.

The desk study information is not necessarily exhaustive and further information relevant to the site may be available from other sources.

The accuracy of maps cannot be guaranteed and it should be recognised that different conditions on site may have existed between and subsequent to the various map surveys and editions published.

No sampling or analysis has been undertaken in relation to this desk study.

Where any data supplied by the Client or from other sources, including previous site investigations, have been used it has been assumed that the information is correct. No responsibility can be accepted by Compass Geotechnical Limited for inaccuracies in the data supplied by any other party.

The report and/or opinion will be prepared and written for the specific purposes and/or development stated in the document and in relation to the nature and extent of proposals made available to us at the time of writing. The recommendations should not be used for other schemes on or adjacent to the site.

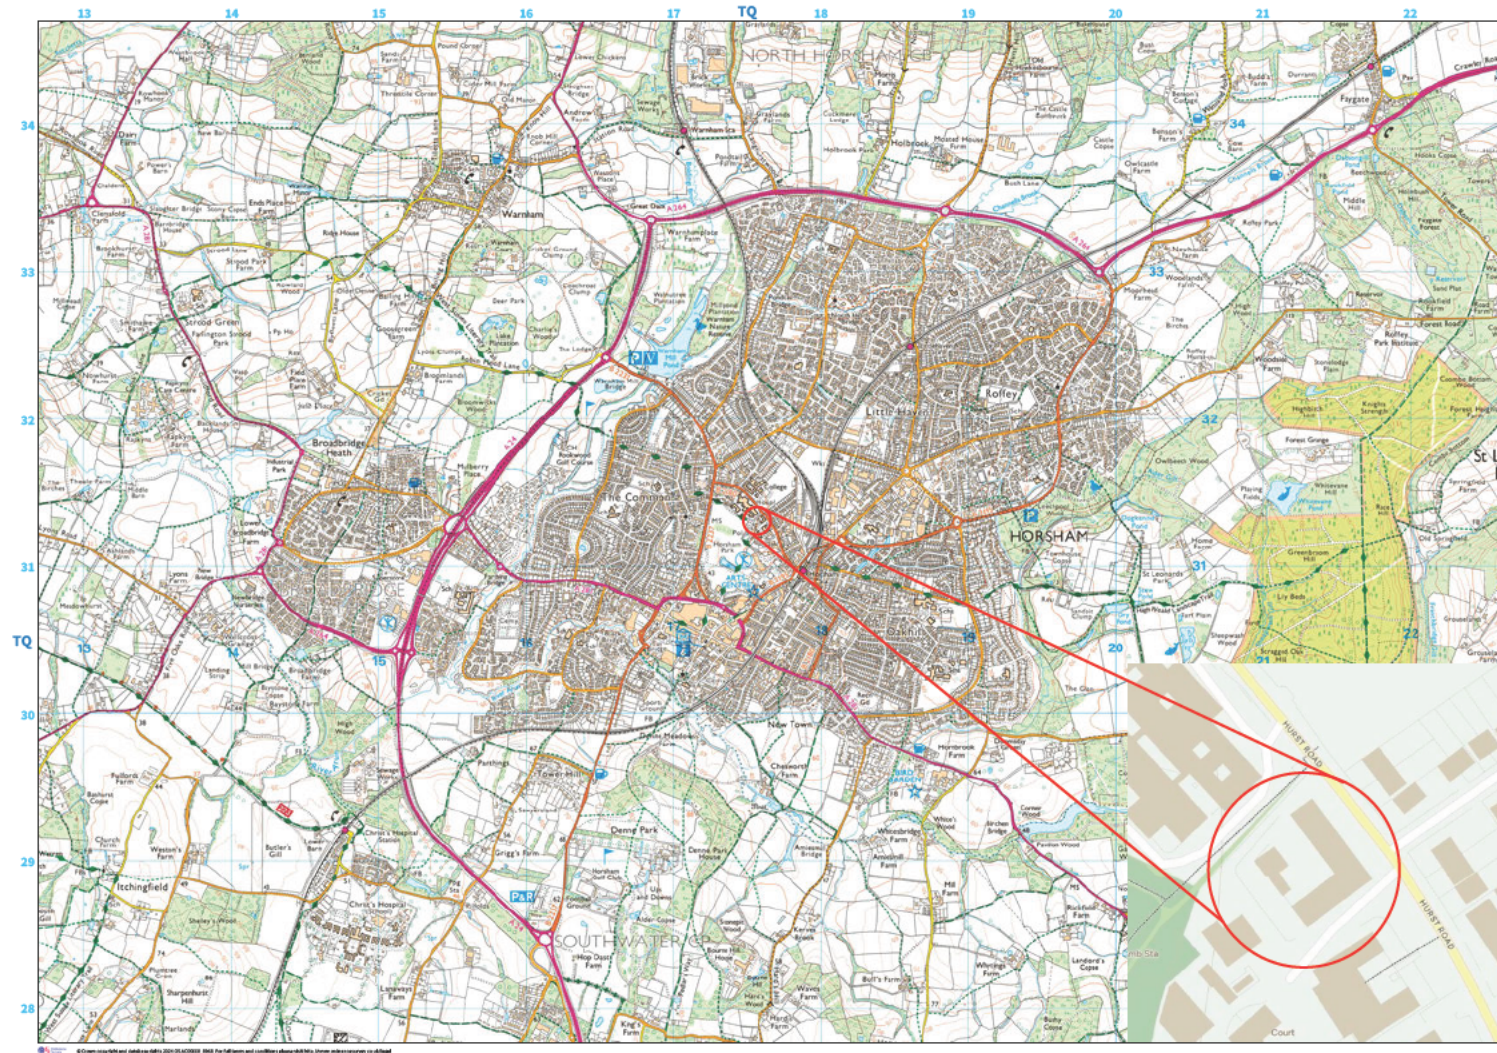

New information, improved practices, changes in legislation, or changes in guidelines from Statutory Bodies may necessitate a re-interpretation of the report in whole or part after its original submission.

The copyright of this report and other plans and documents prepared by Compass Geotechnical Limited are owned by them. The copyright in the written materials shall remain the property of Compass Geotechnical Limited but with a royalty-free perpetual licence to the client deemed to be granted on payment in full to Compass Geotechnical Limited by the client of the outstanding monies.

The report is provided for the sole use of the client and is confidential to them, their professional advisors, no responsibility whatsoever for the contents of the report will be accepted to any person other than the client.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
