Dear Planning Officer,

Former Rushfield Nurseries, Thakeham
Application to discharge Conditions 9 and 11 of planning permission DC/26/0912

Please find enclosed the Construction Environmental Management Plan (Biodiversity) and Reptile Precautionary Working Method Statement, prepared by EcoSupport to discharge Conditions 9 and 11 respectively.

We have submitted these conditions separately from the remaining ecology details because the reptile-sensitive vegetation clearance is time critical and needs to be undertaken under suitable seasonal and weather conditions, with an ecologist present.

The scheme is being delivered in partnership with Stonewater and is reliant on grant funding linked to commencement this year. Completing the vegetation clearance by the end of October is an important part of achieving this, but the works cannot proceed until Conditions 9 and 11 have been approved.

We appreciate that this is a shorter timeframe than usual, but we would be very grateful if the ecology consultation could be progressed as soon as possible, with a view to determining the application by mid-October. The submitted documents have been prepared specifically against the requirements of the conditions, and EcoSupport will respond immediately if any clarification or amendments are required.

Many thanks for your assistance.

Yours sincerely,

Sam Pinkus
