Proposed tree works to Denne cemetery

T1 and T2 ash trees. The trees have ash die back with multiple nearby targets including a car park and commercial properties. The trees will require sectional dismantling and I want this to happen while the trees are at an earlier stage of the disease and retains some structural integrity.

T3 A multi stem yew which has recently failed. The remaining stems are now structurally compromised and stand over an area with multiple targets. The tree is to be coppiced to ground level and the regrowth monitored according to our inspection schedule.

G1 A group of four ornamental yew trees. These cast considerable shade and are to be coppiced/pollarded to a height of 1.5m in accordance with the site manager's management plan for the site. The regrowth will be monitored according to our inspection schedule.
