Dear Sir/Madam,

Proposal: Erection of a detached chalet style two bedroom dwelling within the curtilage of an existing residential property.

Site address: 1 Stane Street Close Codmore Hill Pulborough West Sussex

Surface water discharge to Foul Network:

Southern Water will refuse any request to discharge surface water into our 'foul only' sewer network and resist a discharge to the combined sewer network, on the grounds that the discharge is detrimental to our sewerage network and can be harmful to the environment. This includes where the surface water hierarchy has been followed and all alternative options have been exhausted. This approach ensures that we work together to better protect the environment, improve water quality, and reduce flood risk. It also supports our work to separate rainwater from sewage at source to meet storm overflow reduction targets under Defra's Storm Overflows Discharge Reduction Plan, as well as to reduce the number of sewer flooding incidents that are caused by hydraulic overload of our sewer network during periods of sustained rainfall.

The above is supported by our Surface Water Management Policy, which is available to view on our website. It is also supported by the National standards for sustainable drainage systems (SuDS) - GOV.UK which states the following in Paragraph 1.10 - Surface water runoff from the development shall not discharge to a foul drainage system.

Condition:

Southern Water does not accept surface water flows into the foul network. Please refer to the Surface water management

<https://www.southernwater.co.uk/media/l23dbon0/surface-water-management-policy-120724.pdf>

SuDS:

The supporting documents make reference to drainage using Sustainable Drainage Systems (SuDS). Where SuDS form part of a continuous sewer system, and are not an isolated end of pipe SuDS component, adoption of SuDS will be considered if requested by the developer if they comply with: Design and Construction Guidance (Appendix C), CIRIA guidance and Southern Water SuDS Guidance available here:

<https://www.water.org.uk/sewerage-sector-guidance-approved-documents/>

<https://www.ciria.org/ItemDetail?iProductCode=C753F&Category=FREEPUBS>

<https://www.southernwater.co.uk/media/14nd13db/suds-final-080824.pdf>

Where SuDS rely upon facilities which are not adoptable by sewerage undertakers the applicant will need to ensure that arrangements exist for the long-term maintenance of the SuDS facilities. It is critical that the effectiveness of these systems is maintained in perpetuity. Good management will avoid flooding from the proposed surface water system, which may result in the inundation of the foul sewerage system.

Thus, where a SuDS scheme is to be implemented, the drainage details submitted to the Local Planning Authority should:

- Specify the responsibilities of each party for the implementation of the SuDS scheme.
- Specify a timetable for implementation.
- Provide a management and maintenance plan for the lifetime of the development.

This should include the arrangements for adoption by any public authority or statutory undertaker and any other arrangements to secure the operation of the scheme throughout its lifetime.

This initial assessment does not prejudice any future assessment or commit to any adoption agreements under Section 104 of the Water Industry Act 1991.

It is possible that a sewer now deemed to be public could be crossing the development site.

Therefore, should any sewer be found during construction works, an investigation of the sewer will be required to ascertain its ownership before any further works commence on site. If this happens, please call our Customer Service Desk on 0330 303 0119.
